

SURVIVE THIS YEAR'S WET SEASON

THATCH BUSTER

A cellulose enzyme product designed to accelerate the decomposition of cellulose

Preparation now for the upcoming Wet Season is a must. Break down excess thatch to ensure less water is tied up in the surface of the green. Your greens will appreciate the difference

**THATCH
Accumulation**

Problems

**FLORATINE
THATCH
BUSTER**

**THATCH
Reduction**

Can be caused by :

- > Club does not allow superintendent to do cultural practices regularly.
- > Too many players per month
- > Poor turf management, poor nutrition management and water management (over watering).
- > Do not have the right machinery to carry out cultural practices.

- > Soft, spongy underfoot conditions when wet.
- > Produce slow surfaces that are prone to pitch mark damage.
- > Hard, unreceptive surfaces when dry (hydrophobic soils).
- > Harbour for disease pathogens.
- > Promote shallow root development.
- > Increase build up of fertilizers and salts.

1.5 hectare needs :

- > 9 bottles,
- > 3 thatch reducing agent,
- > 6 activator solution

Application once a month for at least two applications.
Product should be watered in for 6 minutes

Benefits applying Thatch Buster :

- > Allow the soil to breath
 - > Increases microorganism population.
 - > Accelerate decomposition of thatch layering.
 - > Promote conversion of dead clippings to usable nutrients.
- Easy to apply and does not disturb the playing surface.
